

Student Registration Process Analysis Report (AS-IS vs. TO-BE)

1. Executive Summary

This report analyzes the current manual student registration process (**AS-IS**) at the university and outlines an optimized, automated workflow (**TO-BE**) implemented via UiPath Robotic Process Automation (RPA). The automation aims to eliminate manual data entry errors, drastically decrease processing times, and enable 24/7 registration services for incoming students.

2. AS-IS Process (Current Manual System)

- **System Overview:** A traditional, paper-intensive registration workflow requiring physical attendance, manual paper inspection, and repetitive manual data typing into the university's Student Information System (SIS).
- **Key Process Steps:**
 1. **Application Submission:** The student physically submits a paper application form along with printed documents (ID card, High School Certificate).
 2. **Manual Document Verification:** A registration clerk reviews the physical documents for completeness and validity.
 3. **Manual Data Entry:** Upon approval, the clerk manually types student information line-by-line into the SIS database.
 4. **Invoice Generation & Payment:** The clerk calculates fees manually, prints a paper invoice, and sends the student to the cashier or bank.
 5. **Payment Verification & Approval:** The student returns with a physical payment receipt; the clerk verifies the receipt in the system and prints a paper registration confirmation and Student ID.
- **Key Bottlenecks & Issues:**
 - High operational time per student and long waiting queues.
 - Susceptibility to human data-entry errors in student records.
 - Dependency on staff office hours and physical presence.

3. TO-BE Process (Proposed RPA Automated System)

- **System Overview:** A streamlined digital workflow powered by a **UiPath RPA Bot** that automatically extracts uploaded student data, validates information, interfaces directly with the SIS database, and dispatches confirmation notices.
- **Key Process Steps:**
 1. **Digital Submission:** The student submits an online form and uploads scanned documents via the university web portal.
 2. **Automated Document Reading (OCR):** The UiPath Bot reads the uploaded documents using Optical Character Recognition (OCR) and validates required fields automatically.
 3. **Auto Data Insertion:** The Bot directly inserts the verified student record into the SIS Database with zero human intervention.
 4. **Digital Fee Link Generation:** The Bot calculates tuition fees according to university rules and generates a secure online payment link.
 5. **Payment Trigger & Confirmation:** Upon online payment success, the payment gateway notifies the Bot, which instantly generates and emails a digital Student ID and confirmation letter to the student.
- **Key Automation Benefits:**
 - 100% accuracy in data transferring with zero human typo errors.
 - Processing time reduced from days/hours to less than 3 minutes.
 - 24/7 service availability accessible remotely from anywhere.

4. Comparative Analysis Matrix

Feature / Metric	AS-IS Process (Manual)	TO-BE Process (RPA Automated)
Execution Medium	Physical Forms & Paper Records	Digital Web Portal & Cloud Integration
Data Entry Method	Manual Typing by Clerk	Automated Extraction & Direct SIS Entry
Average Processing Time	2 - 5 Working Days	Under 3 Minutes
Error Rate	Moderate to High (Human Error)	0% (Standardized Bot Logic)
Service Availability	Working Hours Only (e.g., 9 AM - 2 PM)	24/7 Continuous Automated Service
Resource Dependency	High Staff Workload	Fully Automated (Minimal Supervision)
